### Red palm weevil small and medium bucket

**Price per Unit (piece): €35.00**

The red palm weevil is quickly killing off the valuable palms by landing on the tree and boring a hole, in which up to 300 eggs are deposited. The eggs quickly pupate and feed on the tree from the inside out. Our remedy is to catch the weevil, by luring them into a specially designed bucket, where they drown. The bucket also has a ferromone lure which is irresistible for the weevil. Package is bucket and lure.
